

# Product Requirements Document (PRD): Custom Estimation App

## 1. Project Overview

The **Custom Estimation App** is a specialized web-based platform designed to streamline the creation, management, and approval of project estimates (likely for construction, interior design, or similar industries). It facilitates collaboration between estimators, administrators, and clients, integrating product management, automation, and client communication into a unified workflow.

## 2. User Roles

- **Super Admin:** Full system access, including system-wide settings, permissions, automation configuration, and user management.
- **Estimator Admin:** High-level access to manage templates, products, and team-wide settings.
- **Estimator:** Primary user responsible for creating estimates, managing clients, and tracking project progress.
- **Client:** External user who views, approves, or declines estimates via a secure portal.

## 3. Core Modules & Use Cases

### 3.1 Authentication & Profile

#### Pages:

- `/login`, `/register`, `/password/reset` : Standard authentication flows.
- `/profile` : User profile management.

#### Use Cases:

- **User Registration/Login:** Secure access for internal team members.
- **Profile Management:** update personal details, change passwords, and manage notification preferences.
- **AI Description Generation:** Use Generative AI to create professional bios or descriptions.

## 3.2 Dashboard

**Page:** `/dashboard`

**Use Cases:**

- **Overview:** View high-level metrics (e.g., pending estimates, recent activities).
- **Quick Actions:** Shortcuts to create new estimates or contacts.
- **Notifications:** See recent alerts and task reminders.

## 3.3 Estimate Management

**Pages:**

- `/estimates` : List of all estimates with filtering/sorting.
- `/estimates/create` : Creation wizard for new estimates.
- `/estimates/{id}/edit` : Comprehensive editor for line items, rooms, and details.
- `/estimates/{id}` : detailed view of an estimate.

**Use Cases:**

- **Create Estimate:** Initialize a new project estimate for a specific client.
- **Add Line Items:** Add products/services from the library or create custom items.
- **Room/Section Management:** Organize items by rooms (e.g., Kitchen, Living Room) using templates.
- **Pricing & Calculations:** Automatic calculation of subtotals, taxes, and margins.
- **Approval Workflow:** Submit estimates for internal review/approval before sending to clients.

- **Versioning:** Create and manage multiple versions of an estimate (e.g., V1, V2).
- **PDF Generation:** Generate professional PDF documents for the estimate.
- **Send to Client:** Email the estimate directly to the client with a secure link.
- **Comments:** Internal team collaboration via comments on specific estimates.

### 3.4 Client Portal

#### Pages:

- `/portal/estimates/{id}` (Signed Route)

#### Use Cases:

- **View Estimate:** Clients can view the detailed estimate online without logging in (via unique link).
- **Accept/Decline:** Digital signature/action to accept or reject the proposal.
- **Comments/Questions:** Clients can post comments or request changes directly on the portal.
- **Request Call:** One-click action to request a follow-up call.

### 3.5 Product Library

#### Pages:

- `/products` : Catalog of available materials/services.
- `/categories` : Hierarchical organization of products.

#### Use Cases:

- **Manage Products:** internal database of items with costs, prices, images, and descriptions.
- **Import/Export:** Bulk update products via CSV/Excel.
- **Approval Workflow:** New products may require approval before becoming active in estimates.
- **Categorization:** Organize items for easy retrieval during estimation.

### 3.6 Client/Contact Management

### Pages:

- `/clients` : Directory of all clients.

### Use Cases:

- **Client Database:** Store contact details, interaction history, and associated estimates.
- **Integration:** Sync with external CRM (Perfex) for unified lead management.

## 3.7 Templates & Resources

### Pages:

- `/templates` (Room Templates): Pre-configured sets of items for common rooms.
- `/email-templates` : Standardized email bodies for consistency.
- `/pdf-templates` : Layouts and styles for generated PDFs.

### Use Cases:

- **Standardization:** Ensure consistency across all estimates using pre-set templates.
- **Efficiency:** Rapidly build estimates by importing full room setups (e.g., "Standard Bathroom").

## 3.8 Automation & Workflows

### Pages:

- `/admin/automation` : Visual builder for automation flows.
- `/admin/automation/experiments` : A/B testing for automation rules.

### Use Cases:

- **Workflow Automation:** Trigger actions (emails, status updates) based on events (e.g., "Estimate Viewed", "Client Accepted").
- **Nurture Sequences:** Automated follow-up sequences for unresponsive leads.
- **Visual Building:** Drag-and-drop interface to design complex logic flows.
- **Analytics:** Track the performance of automation rules.

## 3.9 Admin & Settings

### Pages:

- `/settings` : System-wide configuration.
- `/users` : Manage team members and roles.
- `/permissions` : Define granular access controls.
- `/approval-chains` : Configure who needs to approve estimates based on value/criteria.

### Use Cases:

- **Team Management:** Onboard new staff and assign appropriate roles.
- **Policy Enforcement:** Set rules for minimum margins, discount limits, and approval thresholds.
- **Branding:** Manage company logos, colors, and document styles.

## 3.10 Reporting & Analytics

### Pages:

- `/reports` : General business reports.
- `/estimates/{id}/analytics` : Specific engagement data for an estimate (views, time spent).

### Use Cases:

- **Business Intelligence:** Track conversion rates, revenue pipeline, and team performance.
- **Engagement Tracking:** See when and how long clients view estimates to gauge interest.

## 4. Technical Integrations

- **Perfex CRM:** Two-way sync for clients and leads.
- **Email (SMTP/Mailgun):** Transactional and marketing email delivery.
- **PDF Generator:** Server-side rendering of high-fidelity documents.

- **Pixel Tracking:** Invisible pixels to track email opens and view events.
